- High quality digital and analog video output
- Addressable receivers and receiver groups
- Internet delivery
- Player supports DVI/VGA, or Svideo video connections to your screens
- Intel based mobile processor, embedded XP operating system HDD for content storage
- Cool, quiet, reliable appliance
- Write Protected Flash Boot Device
- Optional Flash Data Drive

# NovraLink SSP-100 Digital Signage Player

The following Novralink network diagram shows a high level view of a Novralink network showing both Internet and Satellite delivery networks. The Novralink Partner does not need to house any equipment other than their operations staff computers and a broadband Internet connection to manage the content via the Content servers and to interact directly with the players via the secure operations and maintenance player network. The Novralink Content servers are hosted at well connected hosting sites with high availability. The O&M network provides partner and Novra staff direct access to player monitoring and maintenance. The router/firewall are third party products that meet the regional requirements and networking standards and are compatible with Novra's O&M VPN servers.
